In this regard, the aqueous electrolyte secondary battery is a battery in which lithium is used as an active material of an electrode, and a lithium ion moves in an aqueous electrolyte solution. The lithium secondary battery has a high discharge voltage and high energy density. Accordingly, the lithium secondary battery has been widely used in the fields of cellular phone and a digital camera, is commonly equipped with a camera for converting an image into an electrical signal. The electrical signal is transmitted through wires, such as a main circuit board and an antenna, and is displayed on a display screen of a personal computer or the like. In such a configuration, however, when the electrical signal is transmitted through wires and a system is large in size. In addition, the cable and the antenna are likely to be an obstacle in view of the design.Q: Java Hashmap variable in for loop I have a variable that I use to populate my HashMap(); map.put("A", new int[]{100 82157476af
